

测验, 6 个问题

恭喜! 您通过了!

下一项

1. How many satisfying assignments does the following formula have?

1 / 1 分

$$(x_1 \vee \bar{x}_2 \vee \bar{x}_3)(x_1 \vee x_2)(\bar{x}_1 \vee \bar{x}_2)$$

3

正确答案

That's right!

2. How many integer solutions does the following linear program have?

1 / 1 分

$$x_1 \geq 0, \quad x_2 \geq 0, \quad 4x_1 + 3x_2 \leq 12, \quad 3x_1 + 5x_2 \leq 15$$

10

正确答案

Right!

3. Consider the following graph:

1 / 1 分

It has 6 different independent sets: empty set,  $\{A\}$ ,  $\{B\}$ ,  $\{C\}$ ,  $\{A, C\}$ ,  $\{B, C\}$ .

How many different independent sets does the following graph have?

7

正确答案

That's right! They are empty set,  $\{A\}$ ,  $\{B\}$ ,  $\{C\}$ ,  $\{D\}$ ,  $\{A, C\}$ ,  $\{B, D\}$ .

4. In the 3-coloring problem, you are given an undirected graph and the goal is to assign one of three available colors to its vertices such that the ends of each edge of the graph receive different colors. This is clearly a search problem: given a graph and a coloring of its vertices, one can check in polynomial time whether there are only three different colors and that no edge is monochromatic. This problem is known to be NP-complete. Do we have a polynomial time algorithm for this problem?

1 / 1 分

☒ This is an open problem.

正确

That's right! We cannot find a polynomial time algorithm for any of NP-complete problems. Nor we can prove that there is no such algorithm. Thus, the existence of a polynomial time algorithm for an NP-complete problem is an open problem.

☐ Yes, this problem can be solved in polynomial time.

☐ No, this problem cannot be solved in polynomial time for sure.

5. In the lectures, we constructed a reduction from 3-SAT to Independent Set. Now, we show the reverse reduction. For this, we are going to reduce Independent set to SAT. We can then use the fact that SAT reduces to 3-SAT.

0 / 1 分

In the Independent Set problem we are given a graph  $G$  with  $n$  vertices  $\{1, 2, \dots, n\}$  and a positive integer  $b$ . Our goal is to check whether the graph has  $b$  vertices  $\{u_1, u_2, \dots, u_b\} \subseteq \{1, 2, \dots, n\}$  with no edge between any pair of them. We are going to construct a CNF formula  $F$  that is satisfiable if and only if the graph  $G$  contains such an independent set. There will be  $bn$  Boolean variables: for  $1 \leq i \leq b$  and  $1 \leq j \leq n$ ,  $x_{ij} = 1$  if and only if the  $i$ -th vertex of the required independent set is the  $j$ -th vertex of the graph (that is,  $u_i = j$ ).

We then introduce the following constraints:

- $u_i$  is equal to some vertex of the graph: for all  $1 \leq i \leq b$ ,  $(x_{i1} \vee x_{i2} \vee \dots \vee x_{in})$ ;
- $u_i$  is equal to exactly one vertex of the graph: for all  $1 \leq i \leq b$  and all  $1 \leq j \neq j' \leq n$ ,  $(\bar{x}_{ij} \vee \bar{x}_{ij'})$ ;
- $u_i \neq u_{i'}$ : for all  $1 \leq i \neq i' \leq b$  and all  $1 \leq j \leq n$ ,  $(\bar{x}_{ij} \vee \bar{x}_{i'j})$ ;
- no two vertices from the independent set are joined by an edge: for all  $1 \leq i \neq i' \leq b$  and all  $\{j, j'\} \in E(G)$ ,  $(x_{ij} \vee \bar{x}_{i'j'})$ .

The resulting formula is satisfiable if and only if the initial graph has an independent set of size  $b$ .

Is this reduction correct?

☐ No, it is not correct, because for a graph that does not have an independent set of size  $b$  it might produce an a satisfiable formula.

☒ No, it is not correct, because it is not a polynomial time reduction.

这个选项的答案不正确

No, it is correct, in fact. The running time of the reduction is polynomial since the total length of the resulting formula is bounded by a polynomial in the number of vertices and edges of the graph: the total number of clauses is at most  $b + bn^2 + b^2n + bn^2 = O(n^3)$  (since  $b \leq n$  and the number of edges is at most  $n^2$ ).

☐ No, it is not correct, because it might produce an unsatisfiable formula for a graph that has an independent set of size  $b$ .

☐ Yes, the reduction is correct.

6. How many satisfying assignments does the following circuit have?

1 / 1 分

3

正确答案

That's right! The only falsifying assignment is  $x = y = 0$ .
